

$$1. \quad f(x) = x^3 \quad x_0 = 1$$

$$f'(x) = 3x^2$$

$$f(x_0) = f(1) = 1^3 = 1$$

$$f'(x_0) = 3 \times 1^2 = 3$$

$$y = f'(x_0)(x - x_0) + f(x_0)$$

$$y = 3(x - 1) + 1 = 3x - 3 + 1 = 3x - 2$$

$$\text{Donc} \quad y = 3x - 2$$
