Ext 1)
$$D = \frac{m' - n}{sc} = \frac{1 - 15}{902} = -256$$

Se diophe est divergent on $D < 0$

2) $D = \frac{m'}{H'F'}$ pain $H'F' = \frac{n}{n'} = \frac{1}{-25} = -904 \text{ m.}$
 $D = -\frac{n}{H'F}$ pain $HF' = -\frac{n}{n'} = \frac{-15}{-25} = 906 \text{ m.}$
 $D = -\frac{n}{H'F}$ pain $HF' = -\frac{n}{n'} = \frac{-15}{-25} = 906 \text{ m.}$
 $D = -\frac{n}{H'F}$ pain $HF' = -\frac{n}{n'} = \frac{-15}{-25} = 906 \text{ m.}$
 $D = -\frac{n}{H'F}$ pain $D = -\frac{n}{15} = \frac{n}{15} = \frac{n}$

5A=-0,04m.

3)
$$94 = \frac{\overline{A'B'}}{\overline{AB}}$$

Puis
$$94 = \frac{m5R'}{m'5R} = \frac{1 \times 0.06}{15 - 904} = -1$$

enfin, $RB' = -1 \times 1 = -1$ cm.

D'après Descentes:

$$\frac{m'}{SA'} = \frac{m'-m}{SC} + \frac{m}{SA}$$

$$\frac{m'}{SA'} = \frac{m'-m}{SC} + \frac{m}{SA}$$

$$\frac{m'-m}{SC} + \frac{m}{SA}$$

$$5R' = \frac{1}{100} = \frac{1}{100}$$

$$35 = \frac{m5A}{m'5A} = \frac{4/3x - 0.45}{1x - 0.3} = \pm \frac{2}{1x}$$
